this book explores the concept of socially responsible psychology in a global age and how it might be used to organize integrate and bring enhanced focus a field that has the potential to contribute to solutions to the world s most pressing problems in this volume the editors explore the central and defining features of socially responsible psychology challenges that this work would face and the mechanisms and processes by which psychological work could be synergistically integrated

with the work of other disciplines for this purpose the volume also examines a variety of factors currently that limit psychology in carrying out this goal

the past decade has brought important new advances in the fields of genetics behavioral genetics linguistics language acquisition studies of language impairment and brain imaging although these advances are each highly relevant to the determination of what a child is innately prepared to bring to language acquisition the contributing fields of endeavor have traditionally been relatively self contained with little cross communication this volume was developed with the belief that there is considerable value to be gained in the creation of a shared platform for a dialogue across the disciplines leading experts in genetics linguistics language acquisition language impairment and brain imaging are brought together for the purpose of exploring the current evidence theoretical issues and research challenges in a way that bridges disciplinary boundaries and points toward future developments in the search for the genetic and environmental bases of language acquisition and impairments this collection provides discussions and summaries of breakthrough findings of the genetic underpinnings of dyslexia theoretical and empirical developments in the specification of a phenotype of language acquisition and impairment evidence of familiarity and twin concordances of specific language impairment and new evidence from brain imaging it concludes with a critical response from an advocate of rational empiricism

psychological science constructs much of the knowledge that we consume in our everyday lives this book is a systematic analysis of this process and of the nature of the knowledge it produces the authors show how mainstream scientific activity treats psychological properties as being fundamentally stable universal and isolable they then challenge this status quo by inviting readers to recognize that dynamics context specificity interconnectedness and uncertainty are a natural and exciting part of human psychology these are not things to be avoided and feared but instead embraced this requires a shift toward a process based approach that recognizes the situated time dependent and fundamentally processual nature of psychological phenomena with complex dynamic systems as a framework this book sketches out how we might move toward a process based praxis that is more suitable and effective for understanding human functioning

artificial life embodies a recent and important conceptual step in modern science asserting that the core of intelligence and cognitive abilities is the same as the capacity for living the recent surge of interest in artificial life has pushed a whole range of engineering traditions such as control theory and robotics beyond classical notions of goal and planning into biologically inspired notions of viability and adaptation situatedness and operational closure these proceedings serve two important functions they address bottom up theories of artificial intelligence and explore what can be learned from simple models such as insects about the cognitive processes and characteristic autonomy of living organisms while also engaging researchers and
